Minor ii–V–i in all 12 keys

Play the blue chords left to right: ii, V, then either i. **m7♭5 is also written ø7 (half-diminished).** The grey column is the major ii–V–I on the same home note, so you can see what changes.

G minor	Am7♭5	D7♭9	Gm6	Gm(maj7)	Am7 D7 G△7

What changes from major: in C, A becomes A♭ (Dm7 to Dm7♭5, and the ♭9 of G7♭9) and E becomes E♭ in the i chord. The A♭ then falls a half step to G.
Which i chord? Cm6 sounds warm and settled. Cm(maj7) keeps the B from G7♭9 and sounds more dramatic. Plain Cm7 works too.
One scale for all three: the harmonic minor of the key (in C: C D E♭ F G A♭ B) fits ii, V and the m(maj7) chord. Over m6, raise the A♭ to A. **Flat keys first, then sharp keys.**
